("Jubilee" or "the Company")

Result of AGM

Jubilee announces that at the Annual General Meeting of the Company held today at 10:00am all resolutions were passed.

Chief Executive Colin Bird reported on what has been a very progressive year for Jubilee. The Company's focused exploration programmes have been highly productive and achieved significant results.

Drilling results from Jubilee's flagship Tjate platinum project in the eastern Bushveld of South Africa have confirmed the presence of the Merensky and the UG2 chromitite platinum-bearing reefs, with grade and thickness of reefs consistent with, and in some cases, exceeding expectations.

Colin Bird commented further on the drilling success at the Londokomanana project in Madagascar which resulted in significant multi-metal intersections. The results demonstrated the intersections carried good grades of a highly attractive suite of metals - nickel, copper, platinum, palladium and gold - over large widths. The Company continues to explore the area to confirm and identify continuity and a viable strike length of mineralisation.

On 1 November, 2005 Jubilee announced an agreement with BHP Billiton to carry out a large-scale helicopter Versatile Time-Domain Electromagnetics geophysical survey over Jubilee's property at no cost to the Company.

In review, Colin Bird reported that he was pleased with the progress made in what has been a very productive year for Jubilee, and the Company continues to consolidate its position across these prospective regions.
